Questions & Answers

Q3 2026

Can you elaborate on the negative effect on the underlying operating profit from the nuclear outages? When are the reactors expected to be back online?
The lower electricity generation from nuclear power is mainly due to outages of Ringhals 3 and Ringhals 4. In total, the electricity generation from nuclear power was 4.8 TWh lower for the first nine months compared to the same period last year, and 2.5 TWh lower in Q3.

The annual outage of Ringhals 3 has been extended, with the reactor expected to be back online on 18 November. Ringhals 4 entered its annual outage earlier than planned, on 19 August, and the outage is currently planned to continue until 20 November.

Why has Vattenfall updated its target for Absolute CO_2 emissions and restated the outcomes?
Vattenfall's climate ambitions are intact, and we are determined to continue driving the transition towards a fossil-free society. The updated target and restatement reflect a mandatory recalculation of our science-based targets following established climate accounting rules. We have adjusted the inventory to reflect divested assets and updated inventory of sales contracts; this leads to a target level that is aligned to the new inventory baseline that maintains our 1.5°C-aligned pathway and net-zero 2040 commitment.
